anticipatory policies. Convey a baseline RIP of the relevant TSFD review processes for a specific technology or system to a group of potential recipient countries identified in that policy.

ATTR SSG. The ATTR SSG serves as the senior decision-making body that provides guidance and direction to the DoD TSFD processes involved in the transfer of defense articles and the release of classified or sensitive technology to international partners in support of U.S. policy and national security objectives. Enclosure 2 of this directive defines the ATTR SSG’s membership and describes its mission and functions.
critical technologies. Technology or technologies essential to the design, development, production, operation, application, or maintenance of an article or service that makes, or could make, a significant contribution to the military potential of any country, including the United States. This includes, but is not limited to, design and manufacturing know-how, technical data, keystone equipment, and inspection and test equipment.

PTR. A review of an offer for cooperation, sale, or other transfer that is determined by a DoD Component or ATTR SSG member to have real or high potential for senior leadership (e.g., Secretary of Defense, Deputy Secretary of Defense, Under Secretary of Defense, or four-star generals or flag officers) direction, interest, or involvement.

RIP. A TSFD document that represents ATTR SSG approval of the intent to release certain technologies with the understanding that the Department of State maintains final decision authority and that the specifics of the release will be determined at a later time.

TSFDO. The TSFDO serves as the Executive Secretariat to the ATTR SSG and as the DoD single entry point for PTR requests and other potential high-visibility cases. It ensures that critical U.S. technology and arms transfer release requests are addressed by DoD TSFD processes in a harmonized and streamlined manner. Enclosure 3 of this directive describes the TSFDO’s mission and functions.
